

VIKING PUMP

A Unit of IDEX Corporation

Viking® Mag Drive Pumps

*Sealless Mag Drive Pumps For Crucial
Liquid Containment Applications*

VIKING MAG DRIVE®

- Eliminates pump seal maintenance
- Highest level of liquid containment available
- Metric or U.S. Design

Sizes in Series: 9

Capacity to 30 M³/Hr (130 GPM)

Pressure to 14 Bar (200 PSI)

Viscosity to 55,000 cSt (250,000 SSU)

Temperature -51°C to 260°C (-60°F to 500°F)

IDEX
CORPORATION

Viking® Advantages

Performance

- No packing or mechanical seals means no seal failure or replacement
- Easily handles both high and low viscosity fluids
- Reduce material loss, contamination and general housekeeping
- Simple design, easy to maintain
- Proven reliability, 100 years of experience

Technology

- Proven sealless design
- Short-term, dry-run capabilities for easy line clearing or emptying tanks without damaging pump
- Viking developed the 1st commercially available internal gear mag drive pump

Productivity

- Highest level of liquid containment available
- Eliminates downtime due to seal replacement
- Local inventory and support worldwide
- Bi-directional pump design for enhanced application flexibility
- Lower life cycle cost

Available Options

- Ports available in ANSI or DIN Flange
- Special construction options for bushings, shaft, & clearances available
- Other options include: power load monitor, temperature probe, and low flow detector
- Gauge ports

The 855 Series Mag Drive uses the Internal Gear pumping principle

The Internal Gear pumping principle offers many advantages over both centrifugal pumps and other types of positive displacement pumps, including:

- High efficiency for low life-cycle cost
- 14 Bar (200 PSI) capability
- Smooth, non-pulsating, low-shear flow
- Self priming capability
- Suction lift capability
- Capacity proportional to speed
- Excellent metering repeatability
- Able to handle thin or thick liquids in a broad temperature range
- Bi-directional pump design
- Easy-to-pipe, straight-through porting

Performance Envelope

Note: Capacities to 38 M³/hr (167 gpm) and/or pressures to 14 bar (200 psi) may be allowable with engineering review.

Hard-to-Seal Liquids

Shaft seal leakage is the number one cause of pump downtime and maintenance. Shaft seals wear faster when liquid, air and heat combine at the seal to cause chemical reactions, like:

- **Crystallization** (e.g. isocyanates). Abrasive crystals cause premature wear.
- **Sticking** (e.g. adhesives, epoxy resins, paints). Seal faces bond when pump stops, and fails at startup.
- **Varnishing** (e.g. petroleum products). Layer builds up on seal faces causing separation.

Typical Applications:

- Isocyanates
- Sodium Hydroxide
- Adhesives
- Epoxy Resins

Hazardous & Reactive Liquids

Shaft seals can allow liquids and vapors out, causing hazardous exposure, and can allow air in, causing unwanted chemical reactions. Traditional sealed pumps, including those that require flushing, quenching and barrier fluids, are subject to the same failures as single seals, with the additional cost and maintenance headaches of the associated equipment (pumps, pressure vessel, tubing/piping, filters, etc.). When the costs of environmental controls are considered, the Viking Mag Drive 855 Series is a cost-effective alternative.

Typical Applications:

- Volatile Organic Chemicals
- Hazardous Chemicals
- LPG and Ammonia
- Reactive Chemicals

24/7 Operations

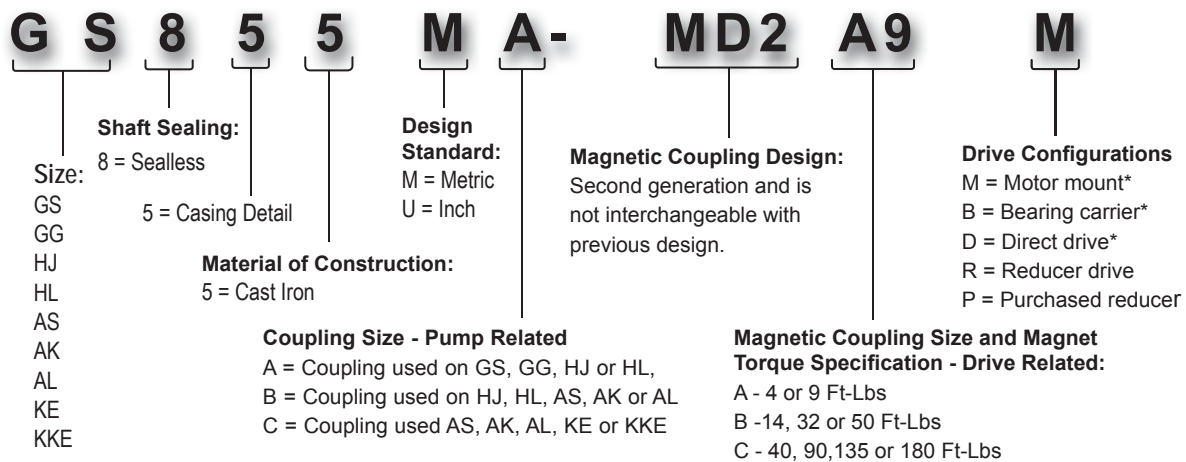

Unplanned downtime to fix a leaky seal is unacceptable in facilities with continuous processes, like refineries, chemical plants and paper mills. Even when pumping “safe” liquids, seals are subject to mechanical problems like loss of compression, misalignment of pump and driver, improper seal installation, shaft deflection causing off-center faces, suction lift (vacuum) causing face separation, and many others. If you can't afford pump downtime, the Viking Mag Drive 855 Series offers exceptional up-time reliability through its robust, sealless design.

Typical Applications:

- Refineries
- Chemical and Polymer Plants
- Paper Mills
- Pipelines

Model Number Key

*To assure the proper bracket and outer magnet is supplied on an M unit (Motor Mounted Drive), the motor frame (NEMA or IEC) must be specified when ordering. For B and D drives, specify the shaft style (inch or metric) that will be required for proper mounting on the unit.

Viking® Benefits

ADVANCED DURABILITY

■ Proven Design

Pump has only two moving parts proven in thousands of tough applications around the world. Simple design minimizes service requirements while providing unmatched durability and reliability.

■ Unique Rotor Positioning System

Thrust washers on both sides of front bushing lock rotor position regardless of application variables. Fixed axial position permits short-term dry-run and bi-directional operation.

■ Heavy Duty Bearings and Bushings

Proven, rugged pump design equipped with heavy-duty bearings and bushings. Provides enhanced shaft support extending pump and in-canister bushing life.

■ Effective Cooling System

Simple, internal channels ensure continuous liquid flow throughout canister removing heat generated by magnetic eddy currents. Protects temperature sensitive liquids and pump

■ Metric or U.S. Design

855 Series are equipped with DIN 2501 or ANSI B16.5 compatible flanges, IEC-B5 or NEMA-C compatible motor flanges and metric or U.S. dimensional bearing carrier shafts. Provides quick, easy installation and compatibility with local standards worldwide.

■ Flanged Ports

In-line ported flanges are standard, offering 90° rotation to vertical or horizontal positions. Provides better sealing reliability than threaded ports.

■ Mounting Configurations

Close-couples to motors up to 15 kW (20 HP) to simplify mounting and eliminates a shaft coupling, guard and shaft alignment. An optional bearing carrier (shown) allows coupling to a speed reducer, gear motor, or standard motor. Provides mounting configuration matched to your application.

■ No Special Tools Required

Jack bolts for coupling disassembly are standard with the pump. Simplifies maintenance and reduces planned downtime.

■ Innovative Magnet Design

Inner magnet is encapsulated in a laser welded stainless steel canister. One-piece design extends pump life and eliminates maintenance.

■ Lifting Lug Included

Allows for easier pump handling when installing, removing or disassembling pump. Simplifies installation.

EASY INSTALLATION

■ Externally Adjustable Relief Valve

Relief valve (not shown) can be adjusted while in service when process conditions change. Provides maximum process up-time.

■ Relief Valve Standard

Pumps come with an adjustable internal pressure relief valve on standard design. Protects pump from over-pressure.

■ Short-Term Dry-Run Capability

Short-term run dry is possible due to state of the art design and magnet technology. Protects the pump during priming and accidental empty-tank situations.

■ Bi-Directional Pump Design

Bi-directional pumping design eliminates cost of second pump and piping needed for loading or unloading or line stripping. Provides application flexibility and reduces system costs.

■ Adjustable End Clearance

Allows the pump to be adjusted for different viscosities and temperatures if process changes, increasing productivity. Single point adjustment maintains and maximizes pump efficiency, extending life.

■ Dual Thrust Control Washers

Positive control of rotor position for more accurate flow also reduces pump wear. Provides lower life cycle costs and improves process control capability.

■ Optimized Efficiency

Proven, optimized gear and pump geometry maximizes overall efficiency. Reduces product operating cost, providing a lower total cost of ownership.

■ Higher Pressure Capabilities

Thrust control, enhanced shaft support and a wide selection of materials permits higher pressure [14 BAR (200PSI)] capabilities. Permits single pump standardization for multiple liquids and applications.

■ Easy Drain and Flush

Pump chamber drain and a canister drain facilitate flushing for easy liquid removal between batch operations or maintenance. Reduces planned downtime for maintenance and housekeeping.

Materials of Construction & Specifications

Viking Mag Drive Series 855 Construction

Component	Standard Construction	Options
Casing, Head, Magnetic Coupling Bracket	Cast Iron	
Shaft	Steel	Hardened Steel
Canister	316 Stainless Steel	
Head Shims	316 Stainless Steel	
Idler	Iron	PPS (complete)
Rotor (GS, GG)	Cast Iron	Steel
Rotor (HJ, HL, AS, AK, AL, KE, KKE)	Ductile Iron	
O-Rings	Buna-N	Viton®, PTFE (Derivative) Encapsulated
Bushings	Carbon Graphite	Hardened Cast Iron
Thrust Washers	Hardened Cast Iron	
Magnets (outer magnets nickel plated, inner magnets sealed in stainless steel canister)	Neodymium Iron Boron	Samarium Cobalt

Viton® is a registered trademark of DuPont Performance Elastomers.

A Unit of IDEX Corporation

Leader in Positive Displacement Pumping Solutions.

Innovation and Experience

Viking Pump has been a pump industry leader and innovator since its founding in 1911. We continue to build on our ever growing experience delivering innovative new pumping solutions, including custom designs, to thousands of customers who use Viking® pumps in some of the world's toughest applications.

Broad Performance Range

Capacity:

0.5 to 360 M³/Hr (0.1 to 1,600 GPM)

Pressure:

0 to 172 Bar (0 to 2,500 PSI)

Temperature:

-84°C to 370°C (-120°F to 700°F)

Viscosity:

0.5 to 1,000,000 cSt (28 to 4,500,000 SSU)

Ultimate in Sealing Solutions

Viking's offering of packing, component mechanical seals, cartridge seals and sealless Mag Drive technology provides the best choices for sealing flexibility needed to provide your application a customized sealing solution every time - saving you money, time and unplanned downtime.

Material Options Matched to Application

Viking's dedicated iron and alloys foundries provide pump construction materials from cast iron to Alloy C. Application-specific materials of construction extend a pump's life significantly, while reducing maintenance and unplanned downtime, enabling increased production and a better bottom line.

Liquid Integrity Protection

Viking has developed multiple positive displacement pump principles to protect shear-sensitive liquids, and low-shear options to prevent damage to fibers, polymers and solids. Full-jacketing options provide precise temperature control throughout the pump. The Viking Mag Drive® and other seal options prevent fluid contact with air, assuring liquid integrity.

Local Applications and Engineering Support

Over 245 Authorized Viking Pump Distributors in 68 countries provide local application support and service. They are backed by Viking Application Engineers and Viking Region Managers strategically located around the world.

Quality Manufacturing

Viking uses ISO9001-2008, Six-Sigma, and Lean/Kaizen in its worldwide manufacturing and assembly processes to remove waste, reduce development costs, and deliver superior products. Dedicated Viking foundries and manufacturing facilities utilize state-of-the-art CNC equipment to assure unmatched quality is built into every pump.

Custom Designed Solutions

Viking has provided custom designed pumps to end-users and OEMs since its first pump in 1911, when Viking invented the gear-within-a-gear pumping principle to remove water from a rock quarry. Today, enabled by Viking's engineering staff, extensive applications experience and in-house foundries, more than 20% of Viking's sales are new designs or pump designs derived from one of our 40,000 active configurations. Whether you are an end-user or an OEM, Viking can provide custom designed pumping solutions to meet your specific needs.
