

- Lower Total Costs → Proven maintenance cost savings when compared to conventional mechanically sealed pumps.
- Maximum Safety → True secondary containment design for volatile, hazardous or expensive liquids.
- Reliability
 - Minimum number of required components.
 - No mechanical seals.
 - E-Monitor Condition Monitoring
- Extended bearing life → SiC-Graphite compound bearings.
- Low Installation Cost
 - Simple, no coupling alignment required.
 - Less space required, in particular for vertical installation.
- Flexibility → Building block system for motors and hydraulics
- Low Noise → Totally enclosed liquid cooled motor with no fans or bearing noise.
