

VIKING PUMP

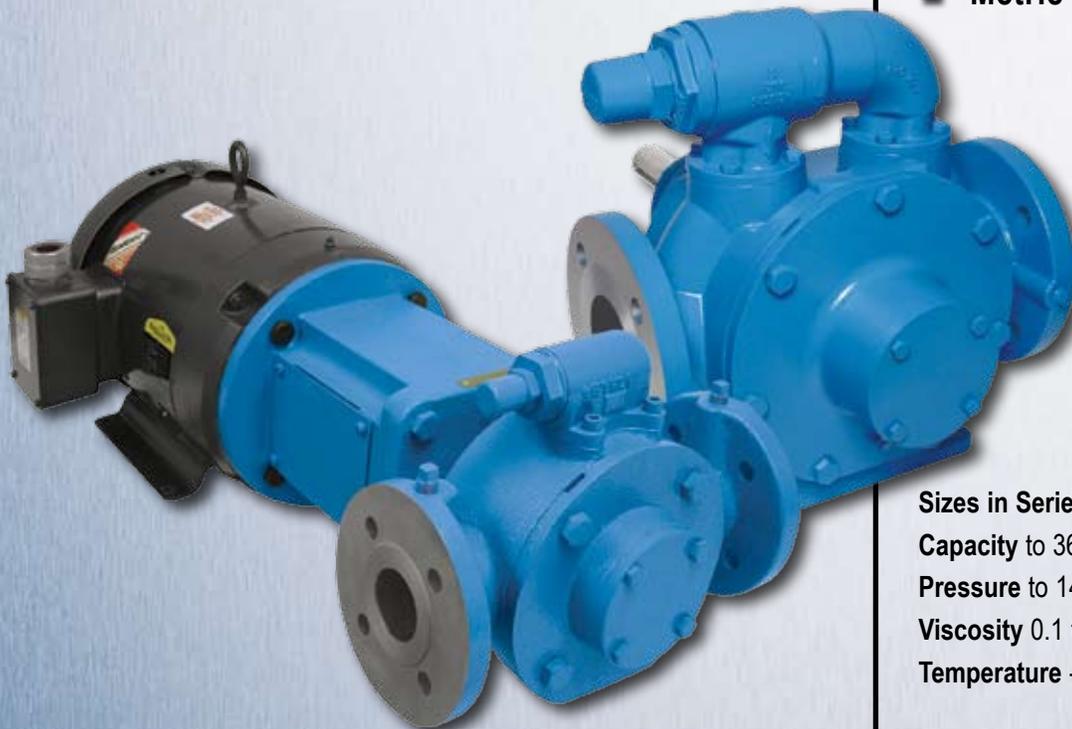

A Unit of IDEX Corporation

Viking® LVP Series Stainless Steel Vane Pumps

Vane Pumps for Corrosive, Thin Liquids at Higher Pressures

- Higher pressures than other stainless positive displacement pumps
- Low-wear, long-life vanes
- Superior suction lift and self-priming ability
- Metric or U.S. design standards

Sizes in Series: 6

Capacity to 36 M³/Hr (160 GPM)

Pressure to 14 Bar (200 PSI)

Viscosity 0.1 to 500 cSt (28 to 2,300 SSU)

Temperature -51°C to +260°C (-60°F to +500°F)

IDEX
CORPORATION

Viking® Reliability in a Stainless Steel Vane Pump

Vane pumps are used for liquid transfer applications ranging from chemicals to liquefied gases. Vanes extend from slots in the rotor, sweeping liquid through a cam-shaped cavity. The vanes provide high volumetric efficiency for lower total cost of ownership.

The Viking Advantages

Advanced Durability

Viking's LVP series vane pump (patent applied for) sets the benchmark for durability with its standard, stainless steel casing surface-hardened to 62 Rockwell C maximizing casing and vane life. Its hard chrome oxide coated shaft turns in a hard silicon carbide sleeve bearing, providing industry leading pressure capabilities to 14 bar (200 PSI).

Ease of Installation

Pump installation has never been easier. The LVP series' DIN or ANSI standard porting simplifies connection to local-standard systems. Top-mounted, adjustable pressure relief valves are standard. For local or remote monitoring systems, Viking's LVP series provides standard gauge ports. A rotatable casing with motor mount option, on the two smallest models, permits vertical or horizontal porting. With motor speed operation up to 23 M³/Hr @ 50Hz (80GPM @ 60 Hz), Viking has eliminated a speed reducer and one shaft alignment, coupling and guard, reducing system costs.

Application Flexibility

Viking's LVP series delivers broad chemical compatibility with high pressure capabilities [14 Bar (200 PSI)] on even the thinnest liquids. Its self-priming, short-term dry-run capability and bi-directional pumping design is ideal for loading/unloading, or line stripping operations. The LVP series delivers non-pulsing, low-shear flow with superior suction lift capability and volumetric efficiency.

Lower Cost of Ownership

The LVP series' easy-to-pipe, straight-through porting design with raised-face IEC or NEMA flanges, elastomeric O-ring seals on the head, relief valve, and seal gland provide superior sealing reliability. The LVP series is also built with fewer parts, minimizing maintenance. Commonality of this series' parts reduces overall parts inventory. In 20 minutes, a vane replacement service can be completed without removing the pump from its system, reducing life-cycle costs. The LVP series has tailored sealing solutions available for virtually every liquid and application to minimize leaks, for a lower total cost of ownership.

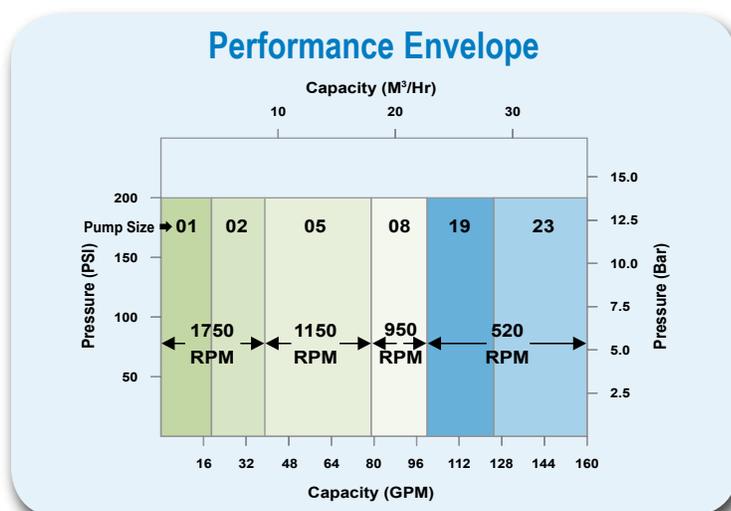

LVP Series' Benefits Compared to Centrifugal Pumps:

- Higher efficiency for low life-cycle cost
- Higher pressure: 14 Bar (200 PSI)
- Self-priming
- Low-shear flow
- Short-term dry-run-capability
- Capacity proportional to speed
- Reversible direction of flow
- Easier-to-pipe, straight-through porting

LVP Series' Benefits Compared to Other Vane Pumps:

- Higher pressure: 14 Bar (200 PSI)
- Harder casing: Hardened to 62 Rockwell C to extend pump life
- Harder bushings: Silicon Carbide sleeve bearings, standard
- Harder shaft: Chrome oxide shaft coatings, standard
- PEEK® vanes and push rods: Provides lower dynamic coefficient of friction
- Metric design standard: DIN raised-face flanges, IEC motor mount, millimeter-dimension seals
- Inch design standard: ANSI raised-face flanges, NEMA C motor mount, inch-dimension seals

Corrosive, Thin Liquids

Viking's LVP pumps are designed for use with thin liquids that are compatible with stainless steel, but not cast iron. Chemical manufacturers and users that run many different liquids through their pumps, want the maximum practical corrosion protection, standard on the LVP series.

Typical Applications:

- Acids and Alkalis
- Alcohols and Solvents
- Aqueous Solutions

Flammable Liquids

The heavy-duty, one-piece, hardened stainless steel casing of the LVP pump series satisfies both the corrosion and thermal shock protection requirements for flammable liquids and liquefied gases in refineries or chemical manufacturing plants.

Typical Applications:

- Monomers
- Hexane, Pentane
- Refined Fuels

Higher Pressures

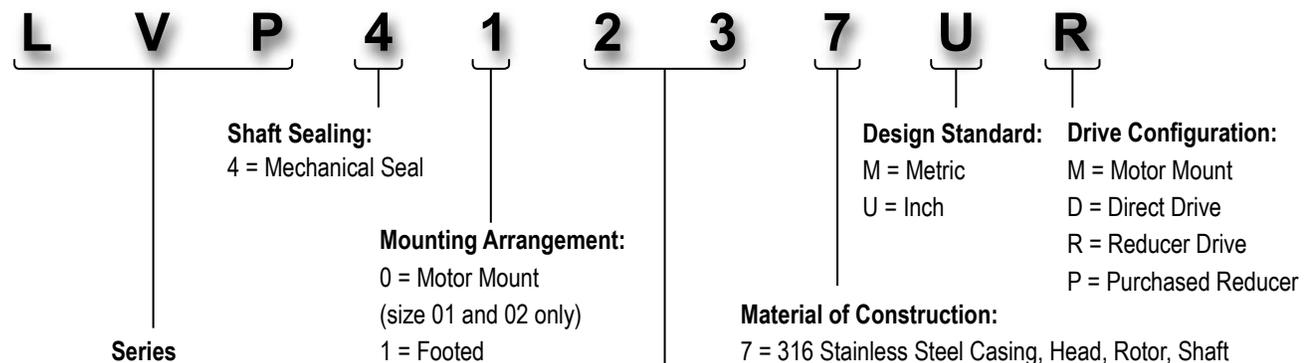

The LVP series develops up to 14 Bar (200 PSI) on thin, corrosive liquids, where gear pumps and other manufacturer's vane pumps are limited to 8.5 Bar (125 PSI) or less. The reduced slip characteristics of Viking's LVP pumps provide enhanced self-priming and suction lift capabilities.

Typical Applications:

- Reactor vessel ingredient metering
- Vacuum vessel service
- Suction lift applications
- Long suction or discharge line applications

Model Number Key

Pump Sizes and Nominal Capacities:

01	Displacement: 4 M ³ /Hr (20 GPM) @ 1750 RPM	DIN 40 or 1.5" ANSI Flange
02	Displacement: 9 M ³ /Hr (40 GPM) @ 1750 RPM	DIN 40 or 1.5" ANSI Flange
05	Displacement: 18 M ³ /Hr (80 GPM) @ 1150 RPM	DIN 50 or 2.0" ANSI Flange
08	Displacement: 23 M ³ /Hr (100 GPM) @ 950 RPM	DIN 50 or 2.0" ANSI Flange
19	Displacement: 29 M ³ /Hr (125 GPM) @ 520 RPM	DIN 80 or 3.0" ANSI Flange
23	Displacement: 36 M ³ /Hr (160 GPM) @ 520 RPM	DIN 80 or 3.0" ANSI Flange

Viking® LVP Series Vane Pump Benefits

ADVANCED DURABILITY

■ Hardened Casing

62 Rockwell C surfaced-hardened stainless steel casing. **Extends casing and vane life, lowering life-cycle costs.**

■ Hard Sleeve Bearing

Hard silicon carbide sleeve bearing, standard. **Extends pressure capability, minimizes wear, and lowers life-cycle costs.**

■ Hard Shaft

Hard chrome oxide coated shaft. **Contributes to industry leading pressure capabilities of 14 Bar (200 PSI), and extends pump life, lowering life-cycle costs**

■ Gauge Ports Standard

Gauge ports standard for easy application of gauges or transducers. **Simplifies installation of local or remote monitoring systems.**

■ Relief Valve, Standard

Top-mounted, adjustable pressure relief valve standard (optional cover plate shown). **Eliminates cost of return-to-tank system. Protects pump from over-pressure from day one and beyond.**

■ Rotatable Casing

Rotatable casing with motor mount option on two smallest models [to 9 M³/Hr (40 GPM)]. **Permits horizontal or vertical porting for easier installation.**

■ Metric- or Inch-Standard Opposite Porting

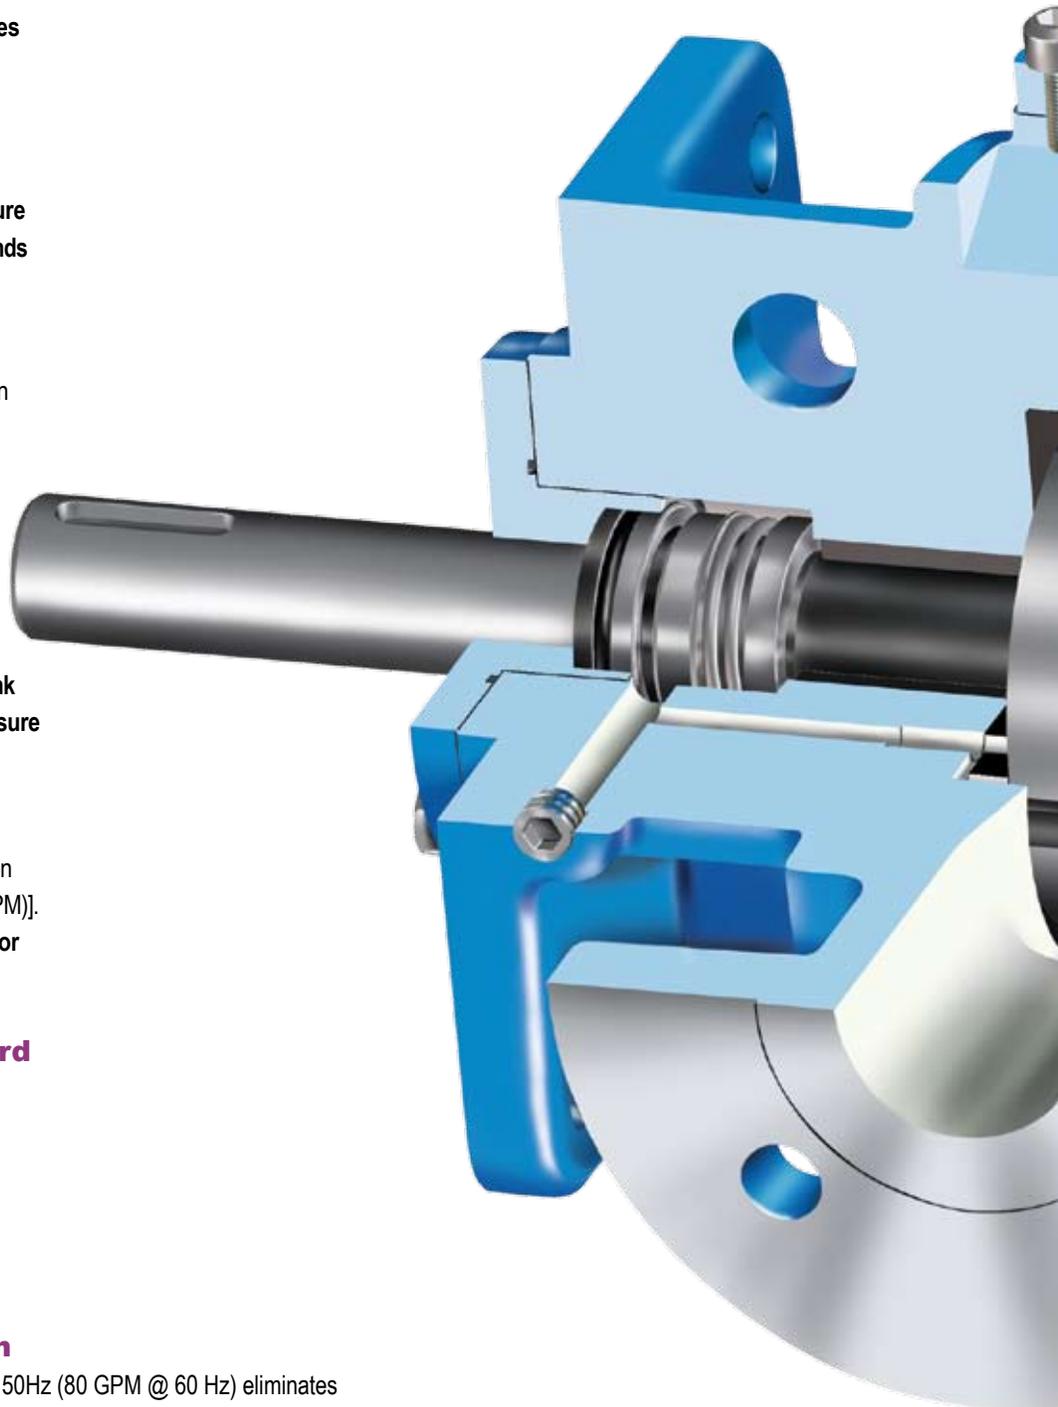

DIN or ANSI standard, in-line porting, allows easy-to-pipe, simple connection to local-standard piping, eliminating adapter leak points. **Reduces costs of installation and maintenance.**

■ Motor Speed Operation

Motor speed operation up to 23 M³/Hr @ 50Hz (80 GPM @ 60 Hz) eliminates speed reducer and one shaft alignment, coupling and guard. **Reduces footprint, system cost, and allows quicker, easier installation.**

■ All-PEEK® Non-Metallic Vanes and Push Rods

PEEK® plastic vanes and push rods. All non-metallic components minimize damage potential that is created by use of metal push rods and metal embedded plastic vanes. **Extends pump life and lowers life-cycle cost.**

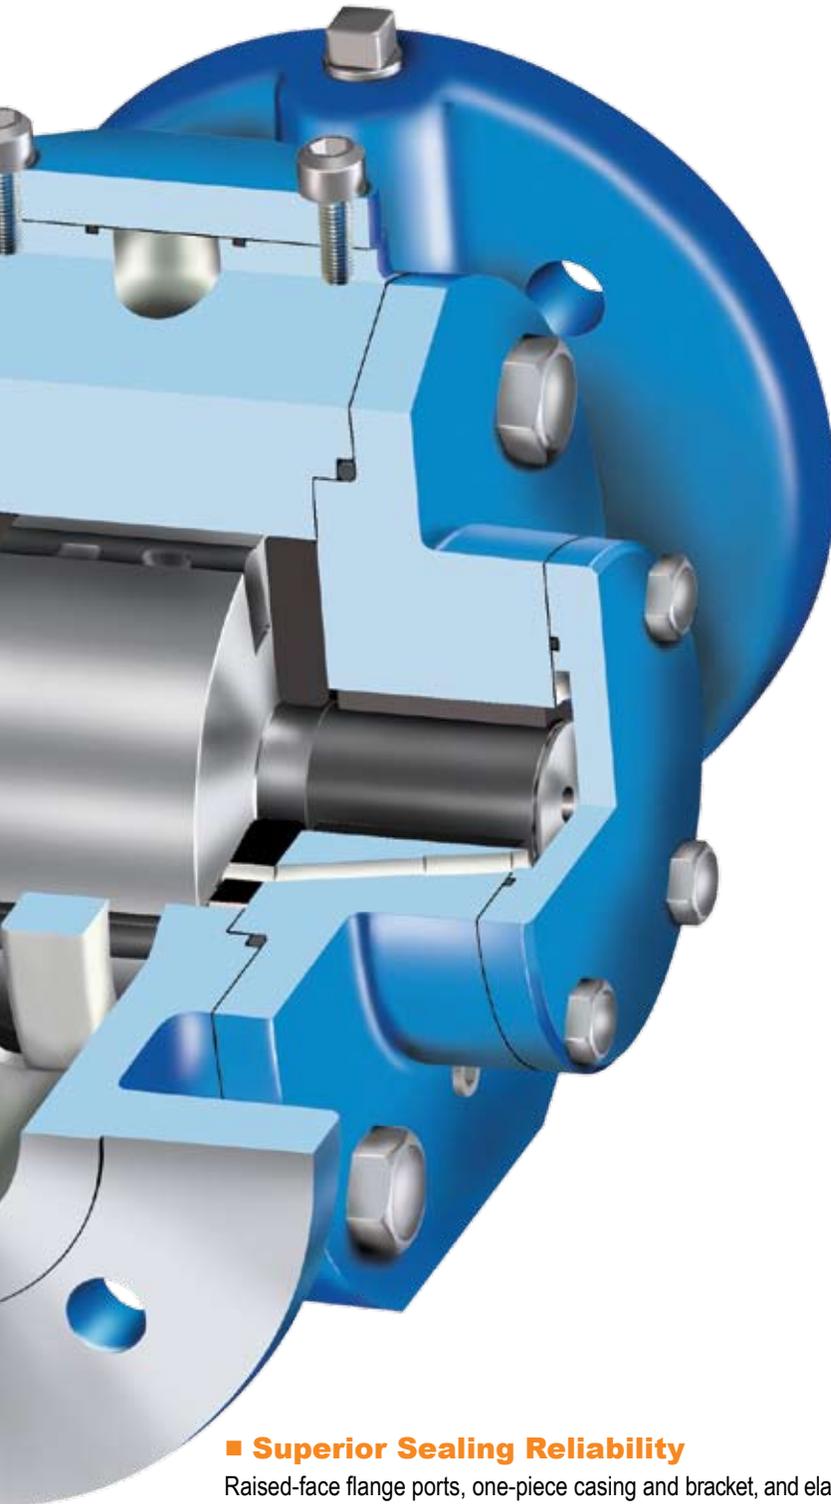

EASY INSTALLATION

■ Superior Suction Lift Capability and Volumetric Efficiency

Pump design provides superior suction lift capability and volumetric efficiency, using less energy. **Provides application flexibility and reduces life-cycle costs.**

■ Superior Sealing Reliability

Raised-face flange ports, one-piece casing and bracket, and elastomeric O-ring seals on head, relief valve, and seal gland provides improved sealing reliability. **Reduces downtime and cleanup, minimizes chemical exposure.**

■ Bi-directional Pump Design

Bi-directional pumping design eliminates cost of second pump, piping, and valving needed for loading/unloading or line stripping. **Provides application flexibility and reduces system costs.**

■ Broad Chemical Compatibility

Combination of Hardened 316 stainless steel casing, PEEK® vanes and push rods, and carbon construction provides broad chemical compatibility. **Permits standardizing on single pump for multiple liquids and applications.**

■ Short-term Dry-Run-Capable

High efficiency pump with self-priming, short-term dry-run capabilities that handles entrained gases. **Allows self-priming; fully emptying tanks.**

■ Higher Pressure Capabilities

Pressure capabilities to 14 Bar (200 PSI), even on the thinnest liquids. **Enhances application flexibility.**

■ 20 Minute Maintenance

LVP series' vane replacement is a 20 minute service item, and does not require rotor and shaft removal or detachment of pump from system. **Reduces scheduled downtime, and lowers cost of ownership.**

■ Parts Commonality

Better design with fewer parts reduces maintenance, and commonality of many parts between frame sizes reduces parts stocking needs. **Provides better parts availability and lower cost of ownership.**

■ Interchangeable Discs

Interchangeable discs may be reversed instead of replaced when worn. **Doubles useful life of parts, for reduced life-cycle cost.**

■ Tailored Sealing Solutions

Tailored sealing solutions are available for virtually every liquid and application, beyond the standard hard silicon carbide mechanical seal. **Prevents leaks and minimizes seal maintenance for a better bottom line.**

APPLICATION FLEXIBILITY

LOWER COST OF OWNERSHIP

A Unit of IDEX Corporation

Worldwide Leader Since 1911 for Positive Displacement Pumping Solutions for Industrial, OEM, and Sanitary Applications.

Innovation and Experience

Viking Pump has been a pump industry leader and innovator since its founding in 1911. We continue to build on our ever growing experience delivering innovative new pumping solutions, including custom designs, to many thousands of customers who use millions of Viking® pumps in some of the world's toughest applications.

Broad Performance Range

Capacity:

0.5 to 360 M³/Hr (0.1 to 1,600 GPM)

Pressure:

0 to 172 Bar (0 to 2,500 PSI)

Temperature:

-40°C to 370°C (-40°F to 700°F)

Viscosity:

0.5 to 1,000,000 cSt (28 to 4,500,000 SSU)

Ultimate in Sealing Solutions

Viking's offering of packing, component mechanical seals, cartridge seals, and sealless Mag Drive technology provides the best choices for sealing flexibility needed to provide your application a customized sealing solution every time - saving you money, time, and unplanned downtime.

Material Options Matched to Application

Viking's dedicated iron and alloys foundries provide pump construction materials from cast iron to Alloy C. Application-specific materials of construction extend pump life significantly, while reducing maintenance and unplanned downtime, which enables increased production and a better bottom line.

Liquid Integrity Protection

Viking has developed multiple positive displacement pump principles to protect shear-sensitive liquids, and low-shear options to prevent damage to fibers, polymers, and solids. Full-jacketing options provide precise temperature control throughout the pump. The Viking Mag Drive® and other seal options prevent fluid contact with air, assuring liquid integrity.

Local Applications and Engineering Support

Over 245 Authorized Viking Pump Distributors in 68 countries provide local application support and service, backed by Viking Application Engineers and Viking Region Managers strategically located around the world.

Quality Manufacturing

Viking uses ISO9001-2000, Six-Sigma, and Lean/Kaizen in its worldwide manufacturing and assembly processes to remove waste, reduce development costs, and deliver superior products on schedule. Dedicated Viking foundries and manufacturing facilities utilize state-of-the-art CNC equipment to assure unmatched quality is built into every pump.

Custom Designed Solutions

Viking has provided custom designed pumps to end-users and OEMs since its first pump in 1911, when Viking invented the gear-within-a-gear pumping principle to remove water from a rock quarry. Today, enabled by Viking's engineering staff, extensive applications experience, and in-house foundries, more than 20% of Viking's sales are new Viking designs, or pumps designs derived from more than 1,000 Viking catalog pumps with more than 40,000 active configurations. So, whether you are an end-user or an OEM, Viking can provide custom designed pumping solutions to meet your specific needs.
